Cut Flowers For Spring

As usual I am booking orders for my famous NOVELTY BOXES which contain a collection of 12 dozen (144) blooms in 12 unusual varieties which are rarely, if ever, available at florist shops. Blooms should be in their prime between 10 March and 15 April. With 590 varieties from which to select those who place orders for boxes at weekly intervals seldom get any duplications. In Gloucester we have daffodils in bloom over a period of 60 days. Price, \$3.50 per box, which includes Special Delivery. Named collections for 1 to 3 blooms at 10 cents per bloom. Garden clubs use these at their meetings to show members some of the marvelous new varieties.

RECEIVED
Daffodils on Parade 1946
U S Department of Agriculture

1946

The Daffodils, also called Jonquil or Narcissus, is one of the most beautiful and permanent of all garden flowers; also a superb cut flower for the house, especially if not kept in a dry over-heated room. They are among the earliest and easiest of all garden subjects, requiring little care or attention. Once planted they will thrive and increase indefinitely. It is advisable however to dig, separate and replant every 3 or 4 years, as multiplication is so rapid that an area of soil that is sufficient to support one bulb cannot take care of 6 or 8 and permit them to produce satisfactory blooms.

Order bulbs in the spring while they are fresh in your memory and avoid the disappointment of orders placed late in the fall. There is always a shortage of rare novelty types; besides most growers replant their valuable stocks by mid-October or sooner. A 5% discount will be given in bulbs (selected by me) on all orders received before 15 June, 1946. Shipment of bulbs will be made early in September. Check with order, please, or if desired they will be sent C. O. D.

Do not put off buying bulbs from this list until next year. DAFFODILS ON PARADE for 1947 will in the main be a different selection of varieties; the reason, my grower is lifting only half his stock each year.

Business reference: Bank of Gloucester, Gloucester, Va.; G. W. Heath, Nuttall P. O., Gloucester Co., Va., and Benjamin G. Fernald, Wicomico, Va.

THE HODGE FODGE

Gloucester, Virginia

(The Heart of the Daffodil Area in Virginia)

* In front of a variety indicates it has won one of the coveted awards at the famous English or Dutch Shows.

PRICES IN QUANTITIES

PLANTING INSTRUCTIONS FOR DAFFODILS

The main requirement for success is a well-drained soil. They are not happy where water will stand for a day or two after rains. Any good garden soil is ideal. Cow manure mixed in the soil at, or preferably before planting time, will produce blooms and bulbs of unbelievable size. Bone meal is the only safe substitute to use at planting time. A top dressing of stable manure during the winter months is always helpful; also, serving as a mulch. In the Middle Atlantic States, plant deep enough so the neck of the bulb is covered with 3 or 4 inches of earth after the ground has settled. In the more Northern States 4 or 5 inches is desirable; while in the Southern States 2 or 3 is sufficient. All questions pertaining to their care and culture cheerfully answered.
